

Polygenic score accuracy retained away from training

Held-out squared correlation with true liability · phenoA · real GWAS + clumping + thresholding

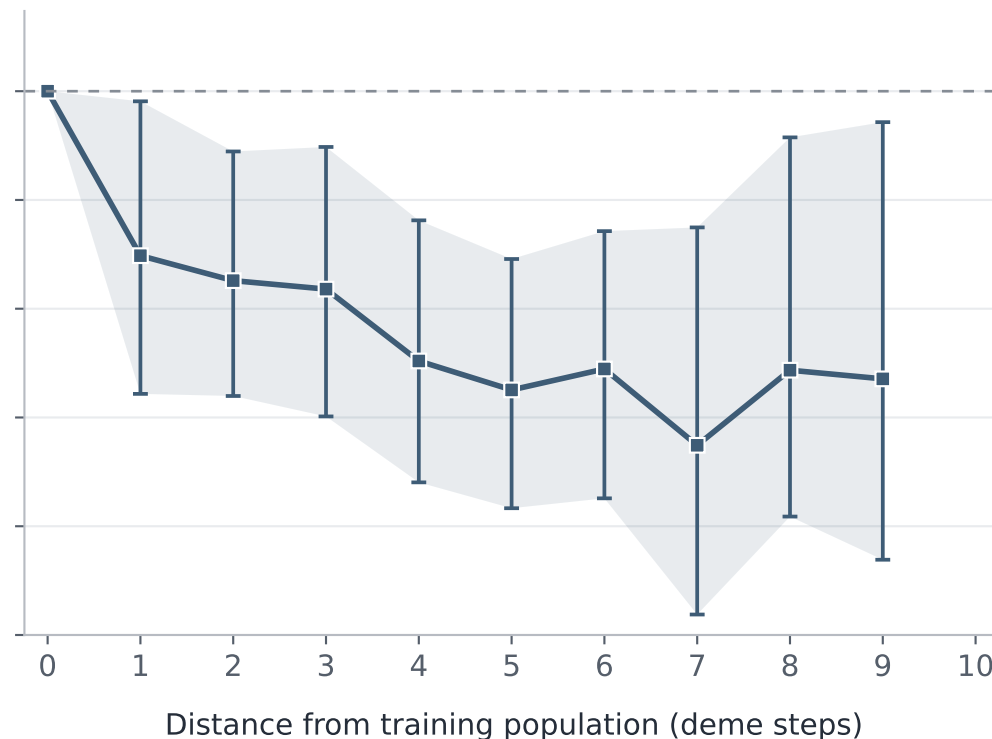

Mean across 11 recovered runs per demography; bars and shading: pointwise 95% bootstrap intervals

2-D grid

Runs: 11 11 11 11 11 11 11 8 7 3 2

1-D chain

Runs: 11 11 11 11 11 11 8 6 6 5

Entire runs are resampled together. Deme ratios are averaged within each run and distance, then across runs.

Descriptive resampling intervals: the continuous model's positive-distance ratio mean is infinite. See the expectation derivation.
