

Polygenic score accuracy away from training

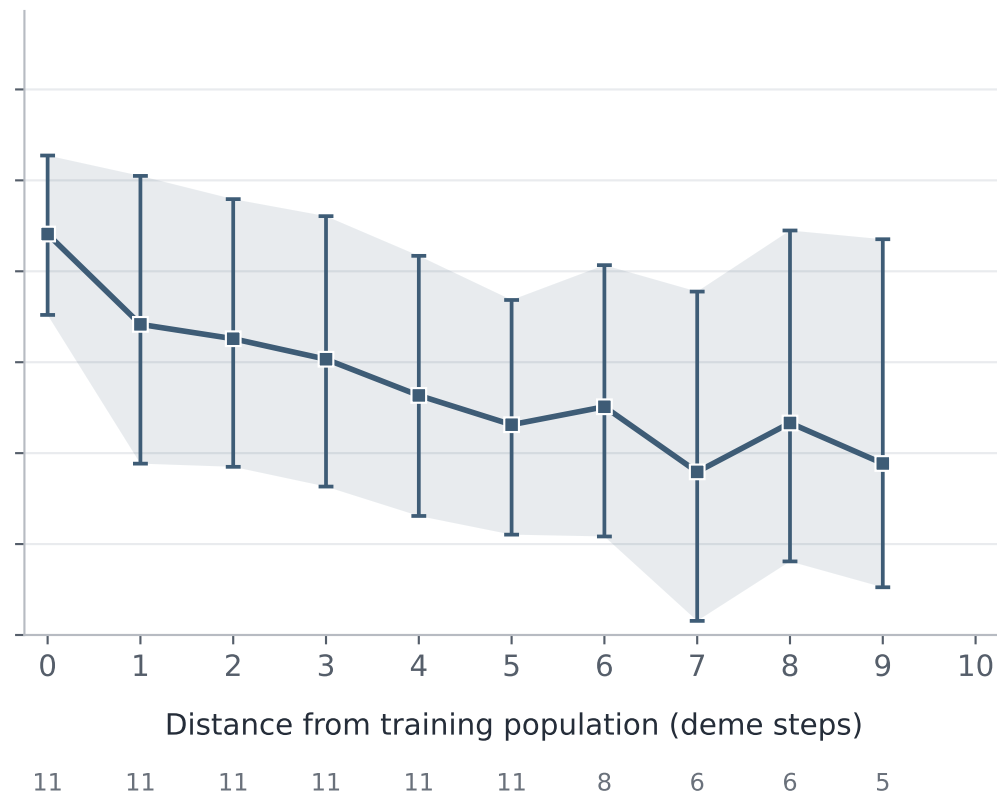

Held-out squared correlation with true liability · phenoA · real GWAS + clumping + thresholding

Mean across 11 recovered runs per demography; bars and shading: pointwise 95% bootstrap CIs

2-D grid

1-D chain

Entire runs are resampled together. Deme ratios are averaged within each run and distance, then across runs.

Far distances occur in fewer runs (counts above); intervals there are less reliable. CIs describe the mean, not the spread of individual runs.
